

NumPy Installation & Version Management Guide

This document provides an **end-to-end checklist** for installing, verifying, updating, and troubleshooting **NumPy** across multiple environments:

- Jupyter Notebook
- Local Environment Terminal (Command Line)
- Google Colab

1. Jupyter Notebook

Check Version

```
import numpy as np  
np.__version__
```

Install Latest Version

```
!pip install numpy
```

Update NumPy

```
!pip install --upgrade numpy
```

Install a Specific Version

```
!pip install numpy==1.26.4
```

Download Only

```
!pip download numpy
```

Uninstall NumPy

```
!pip uninstall numpy -y
```

2. Conda Environment

Check Version

```
conda list numpy
```

Install Latest Version

```
conda install numpy
```

Update NumPy

```
conda update numpy
```

Install a Specific Version

```
conda install numpy=1.26.4
```

Download Only (Without Installing)

```
conda install --download-only numpy
```

Uninstall NumPy

```
conda remove numpy
```

3. Google Colab

NumPy is pre-installed in Colab, but can be managed if required.

Check Version

```
import numpy as np  
np.__version__
```

Update / Reinstall NumPy

```
!pip install --upgrade numpy
```

Install a Specific Version

```
!pip install numpy==1.26.4
```

Download NumPy

```
!pip download numpy
```

Uninstall NumPy

```
!pip uninstall numpy -y
```

Note: Restart runtime after install/uninstall for changes to take effect.
