

statsmodels - Installation, Verification & Troubleshooting Guide

This document provides an end-to-end checklist for installing, verifying, updating, and troubleshooting statsmodels across multiple environments:

- Jupyter Notebook
- Local Environment Terminal (Command Line)
- Google Colab

1. Jupyter Notebook (pip-based)

Check Version

```
import statsmodels
statsmodels.__version__
```

Install Latest Version

```
!pip install statsmodels
```

Update statsmodels

```
!pip install --upgrade statsmodels
```

Install a Specific Version

```
!pip install statsmodels==0.14.4
```

Download Only (Wheel/Source)

```
!pip download statsmodels
```

Uninstall statsmodels

```
!pip uninstall statsmodels -y
```

2. Conda Environment (Anaconda)

Check Version

```
conda list statsmodels
```

Install Latest Version

```
conda install statsmodels
```

Update statsmodels

```
conda update statsmodels
```

Install a Specific Version

```
conda install statsmodels=0.14.4
```

Download Only (Without Installing)

```
conda install --download-only statsmodels
```

Uninstall statsmodels

```
conda remove statsmodels
```

3. Google Colab

statsmodels is pre-installed in Google Colab.

Check Version

```
import statsmodels
statsmodels.__version__
```

Update / Reinstall statsmodels

```
!pip install --upgrade statsmodels
```

Install a Specific Version

```
!pip install statsmodels==0.14.4
```

Download statsmodels

```
!pip download statsmodels
```

Uninstall statsmodels (Not Recommended)

```
!pip uninstall statsmodels -y
```

Note: Restart the runtime after making any installation or update changes.
