

PyTorch, Verification Troubleshooting Guide

This document provides an **end-to-end checklist** for installing, verifying, updating, and troubleshooting **PyTorch** across multiple environments:

- Jupyter Notebook
- Local Environment terminal (Command Line)
- Google Colab

1. Jupyter Notebook (pip-based)

Check Version

```
import torch
```

```
torch.__version__
```

```
import torchvision
```

```
torchvision.__version__
```

Install Latest Version

```
!pip install torch torchvision
```

Update PyTorch

```
!pip install --upgrade torch torchvision
```

Install a Specific Version

```
!pip install torch==2.2.0 torchvision==0.17.0
```

Download Only (Wheel/Source)

```
!pip download torch torchvision
```

Uninstall PyTorch (Not Recommended)

```
!pip uninstall torch torchvision -y
```

2. Conda Environment (Anaconda / Miniconda)

Check Version

```
conda list pytorch
```

```
conda list torchvision
```

Install Latest Version

```
conda install pytorch torchvision -c pytorch
```

Install CPU-only Version

```
conda install pytorch torchvision cpuonly -c pytorch
```

Update PyTorch

```
conda update pytorch
```

Install a Specific Version

```
conda install pytorch=2.2.0 torchvision=0.17.0 -c pytorch
```

Uninstall PyTorch (Not Recommended)

```
conda remove pytorch torchvision
```

3. Google Colab

PyTorch is usually pre-installed in Google Colab.

Check Version

```
import torch
```

```
torch.__version__
```

```
import torchvision
```

```
torchvision.__version__
```

Update / Reinstall PyTorch

```
!pip install --upgrade torch torchvision
```

Install a Specific Version

```
!pip install torch==2.2.0 torchvision==0.17.0
```

Uninstall PyTorch (Not Recommended)

```
!pip uninstall torch torchvision -y
```

Note: Restart the runtime after making installation changes.
