

TensorFlow & Keras, Verification Troubleshooting Guide

This document provides an **end-to-end checklist** for installing, verifying, updating, and troubleshooting **TensorFlow and Keras** across multiple environments:

- Jupyter Notebook
- Local Environment terminal (Command Line)
- Google Colab

1. Jupyter Notebook (pip-based)

Check Version

```
import tensorflow as tf
```

```
tf.__version__
```

```
import keras
```

```
keras.__version__
```

Install Latest Version

```
!pip install tensorflow keras
```

Update TensorFlow & Keras

```
!pip install --upgrade tensorflow keras
```

Install a Specific Version

```
!pip install tensorflow2.15.0 keras3.0.0
```

Download Only (Wheel/Source)

```
!pip download tensorflow keras
```

Uninstall TensorFlow & Keras

```
!pip uninstall tensorflow keras -y
```

2. Conda Environment (Anaconda / Miniconda)

Check Version

```
conda list tensorflow
```

```
conda list keras
```

Install Latest Version

```
conda install tensorflow keras
```

Note: If packages are not available in the default channel, use conda-forge:

```
conda install -c conda-forge tensorflow keras
```

Update TensorFlow and Keras

```
conda update tensorflow
```

```
conda update keras
```

Install a Specific Version

```
conda install tensorflow=2.15.0 keras=3.0.0
```

Uninstall TensorFlow & Keras

```
conda remove tensorflow keras
```

3. Google Colab

TensorFlow and Keras are pre-installed in Google Colab

Check Version

```
import tensorflow as tf
```

```
tf.__version__
```

```
import keras
```

```
keras.__version__
```

Update / Reinstall TensorFlow & Keras

```
!pip install --upgrade tensorflow keras
```

Install a Specific Version

```
!pip install tensorflow2.15.0 keras3.0.0
```

Download TensorFlow & Keras

```
!pip download tensorflow keras
```

Uninstall TensorFlow & Keras (Not Recommended)

```
!pip uninstall tensorflow keras -y
```

Note: Restart runtime after changes
